- ◆ *Water Technologies & Reuse*
- ◆ *Capital Asset Financial Services*
- ◆ *Power Generation*
- ◆ *Lighting Solutions*
- ◆ *Medical Solutions*

**Trusted answers, within easy reach. Just ask SGS.**

**“Our mission, to deliver trusted answers to the government, means providing results that improve performance, effectiveness, and control.”**

## **Operational & Energy Performance**

From building automation to fire and security systems, to telecommunications, our IT-enabled solutions yield the fundamental benefits of greater reliability, safety and security, productivity, and control. We enhance long-term program impact with extensive management and logistics capabilities to install and service systems anywhere in the world. Equally important, we do all of this while helping the government reduce energy consumption and costs.

## **Safety & Security**

The safety and security of America’s Government, citizens, assets and infrastructure, remain a key priority for our nation and SGS. It is our mission to bring the required technologies and expertise to bear for client success. We work closely with our customers to refine integrated technical security systems for buildings, airports, and other sensitive facilities. These solutions include competencies such as building automation, fire and life safety, physical and virtual security, and emerging technologies. We design, install, and maintain a wide range of systems for the government.

## **Program Integration & Interoperability**

We focus on integrating people, processes, equipment, and systems for optimal program performance. SGS maintains robust program management disciplines supported by industry-leading product lifecycle management software (Teamcenter). Our highly skilled technical staff offers solutions ranging from call centers, to dispatch and maintenance services, designed to maintain systems and infrastructure optimally and avoid unnecessary expenses and downtime of equipment and security-related infrastructure.
