

SIEMENS

Siemens Government Technologies, Inc.

We provide the answers that make America work.

Siemens Government Technologies, Inc. is a Federally-compliant U.S. organization structured to provide answers for some of our nations' most challenging issues within the Federal market. The vast Siemens portfolio aligns with key national imperatives like infrastructure, energy, industry and healthcare. Whether the need includes modernizing infrastructure and transportation systems, improving energy efficiency, shifting to cleaner energy or implementing the latest advances in healthcare, we have the solutions.

Siemens Government Technologies is a leading integrator of Siemens' innovative products, technologies and services for programs within the Federal government. With exceptional resources, advanced technologies and client focus, we help advance mission-critical programs for Defense, Intelligence and Civilian agencies to manage operational demands with greater efficiency than ever before. The company meets the needs of the Federal government by providing customized, government-compliant end-to-end solutions to end customers, engineering, procurement and construction firms (EPCs), prime contractors, and other organizations. These solutions and services can be provided in both classified and unclassified Federal environments.

Siemens Government Technologies focuses on establishing partnerships and alliances to expand the traditional Siemens product scope by leveraging proven technologies, project management capabilities, and Siemens' global footprint.

“Siemens has the proven technologies, products, solutions and services to address the current national imperatives in energy, healthcare and infrastructure. We're committed to helping the Federal government achieve unprecedented levels of energy efficiency and independence, enhanced service to the citizens of this nation, and a modernized infrastructure for today and the future.”

Judy Marks,
CEO, Siemens Government Technologies, Inc.

Our highly skilled teams bring expertise to the challenges of our customers, including unsurpassed account and program management experience and an understanding of the security, energy, and operational issues our customers face daily.

Streamlined processes, cross-sector capabilities and comprehensive solutions and services help meet the specialized demands of customers within the Federal marketplace. Siemens Government Technologies can help customers solve current challenges and prepare for the future.

Siemens: Answering complex challenges with practical solutions.

Siemens Government Technologies, Inc. Summary

Energy

The Federal Government faces a monumental energy consumption challenge. Our strategic energy solutions combine efficient energy practices with advanced technologies and alternative energy sources. These solutions benefit our clients in several important ways, helping to reduce energy consumption, control energy costs, and comply with Federal agency goals, regulations and directives.

- Renewables
- Transmission
- Power Generation and Distribution

Healthcare

Demographic change and increasing cost pressure in today's healthcare market require comprehensive solutions that improve quality while simultaneously reducing costs. As one of the world's largest healthcare solutions providers, Siemens responds to these challenges with leading-edge medical technologies that deliver proven clinical, financial, and operational outcomes. We offer our customers products, solutions, and services for the entire range of patient care from a single source. Our comprehensive portfolio of diagnostic imaging and therapy systems, laboratory diagnostics, healthcare information technology, consulting, services and hearing aids enables Siemens to meet our customers' needs across the continuum of care. By optimizing clinical workflows for the most common diseases, Siemens also makes healthcare faster, better and more cost-effective.

- Imaging Technology
- Clinical Technology
- Laboratory Diagnostics
- Health IT

Industry

As global experts in energy, manufacturing and water efficiency, Siemens partners with government agencies to deliver solutions that improve productivity, provide superior ROI, and save millions of dollars in costs each year.

- Motors, Drives, and Propulsion Systems
- Industrial Controls and Automation
- Water
- Product Lifecycle Management (PLM) Sales and Consulting Services

Infrastructure & Cities

Siemens provides performance-based solutions through the use of Contract Vehicles. This allows Federal agencies to leave capital funds intact and enable facility, capital and technology improvements to be made within their existing budgets. This can reduce operating costs while providing the additional value of new, energy-efficient equipment and energy infrastructure. Siemens also takes a balanced holistic approach to mobility. Reliability, safety and efficiency are our top priorities when it comes to transportation.

- Building Controls and Automation
- Low and Medium Voltage Power Products
- Smart/Microgrids
- Data Center Power and Automation Solutions and Services
- Electric Vehicle Infrastructure
- Rolling Stock and Rail Solutions
- Mobility Solutions, Integrated Logistics and Baggage Handling
- Fire and Life Detection, Suppression and Alarm Systems
- Integrated Security Solutions
- Lighting Solutions and Services
- Energy Savings Performance Contracts (ESPC)
