**SIEMENS GOVERNMENT SERVICES INC., IS AWARDED
TRANSPORTATION SECURITY ADMINISTRATION (TSA) - INTEGRATED
LOGISTICS SUPPORT (ILS) CONTRACT**

Reston, Virginia, September 29, 2009 – Siemens Government Services (SGS), an integrator of Siemens innovative technology products, services and solutions to the federal government, today announced that it successfully won a competitive award with the Transportation Security Administration (TSA) providing scanning and screening equipment maintenance and logistic services to the nation's airports. This contract has a four-month base period with four additional one-year option periods, representing a total estimated contract value of \$468.6 million.

Under the terms of the contract, Siemens will provide integrated logistics support services including the scheduled and unscheduled maintenance service for over 12,000 pieces of equipment such as metal detectors and X-ray machines at the nation's more than 450 commercial airports and other Government-designated facilities throughout the United States and its territories. This contract includes call center management, integral to the reporting and correction of equipment failures.

"Siemens recognizes the critical role the Transportation Security Administration plays in protecting the nation's airports and traveling public," said Harry Feuerstein, President & CEO of SGS. "Siemens has held this contract since 2005 and is extremely pleased to have been selected to continue working alongside our TSA counterparts on this highly visible and critical initiative. We look forward to providing innovative technology solutions and superior performance to TSA - all designed to drive improved efficiencies and enhanced results in support of the agency's stringent security mission."

In addition to predictive and preventative maintenance support services, Siemens will also provide TSA with a dedicated Program Management Office (PMO), Performance-Based Logistics Services, and enhanced Information Technology (IT) infrastructures to support this program.

"This is certainly an exciting time for Siemens Government Services," said Wayne Weatherly, Program Manager for TSA ILS. "We believe that our solution allows TSA to have the right staff with the right experience, on-site at the right time, to support its critical mission of keeping our nation, the general traveling public and U.S. commerce, moving securely through our commercial airports."
